🔍 Title: **JP9290359A2: TAPE POLISHING DEVICE**

🔍 Derwent Title: Tape polishing apparatus for magnetic head slider manufacture - has tape conveying block with planar part whose width is smaller than that of polishing tape and length less than predetermined value [\[Derwent Record\]](#)

🔍 Priority Number: **1996-04-26 JP1996000129254**

🔍 Abstract: **PROBLEM TO BE SOLVED:** To provide a tape polishing device that can control the machining quantity of a magnetic head slider uniformly with accuracy.

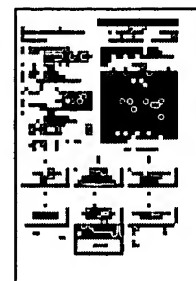

SOLUTION: A block plane 15b is provided at the top part of a tape conveying block 15. The width W of the block plane 15b is made smaller than the width of a polishing tape, and the length L of the block plane 15b is set along with the width W according to the characteristic polishing condition of a device. For instance, it is most desirable that the width W of the block plane 15b is 65-75% of the width of the polishing tape and that the length L is 3-5mm.
